

A household assistant that knows your home.

Verid brings live camera understanding, product records, and household context together on a mobile-first experience.

Live video conversation
Household graph awareness
Built for mobile

A working product for the moment homeowners need context: when something breaks, expires, or gets forgotten.

A product's history disappears the moment it enters the home

Documents, hardware evidence, and service events live apart. That makes a simple warranty claim or maintenance decision unnecessarily hard.

01

Proof is scattered

Invoices sit in chat threads, folders, and drawers while model and serial details fade from view.

02

Care arrives too late

Warranty deadlines, filters, cleaning, and service history surface only after a failure.

03

Files cannot answer

A storage folder cannot connect a real appliance to evidence, a manual, and the next action.

The missed opportunity: turn ownership records into a reliable, usable household memory.

One verified passport for every important product

Verid pairs commercial evidence with a real product photo before it creates a household record.

EVIDENCE

RapidOCR + YOLO

Extracts facts
Checks the physical object

A durable record with evidence, identity, warranty, manual, service history, and next actions.

Live vision understands the room and the household behind it

The primary experience combines a live camera conversation with the household graph. A compact detector adds fast support for common appliance categories.

Live context

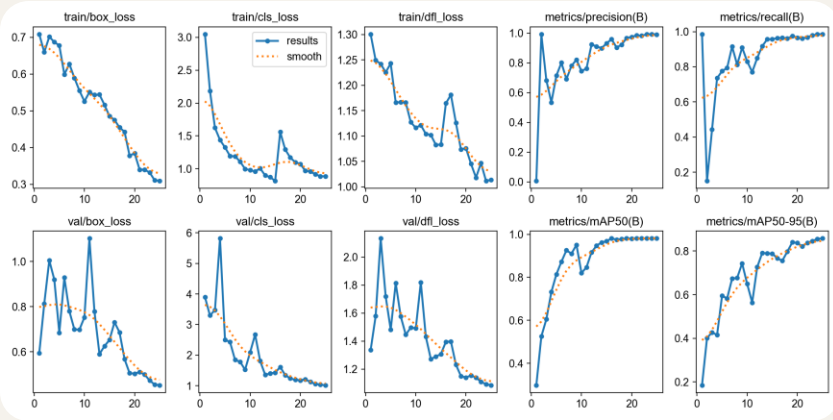

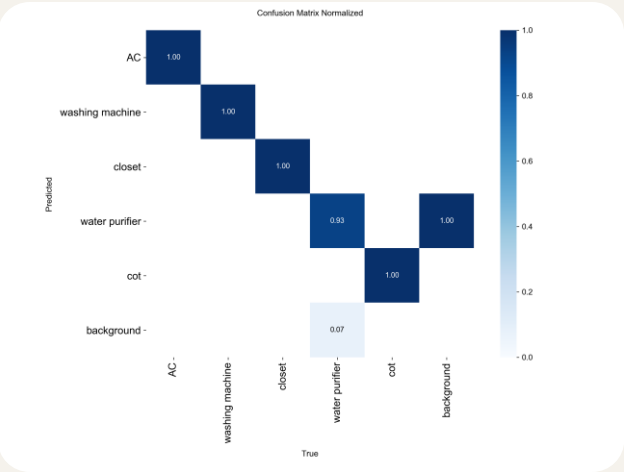

Camera view plus the household graph

99.29%

Supporting detector precision

69-97 ms

Supporting detector latency on CPU

Live camera conversation with your home

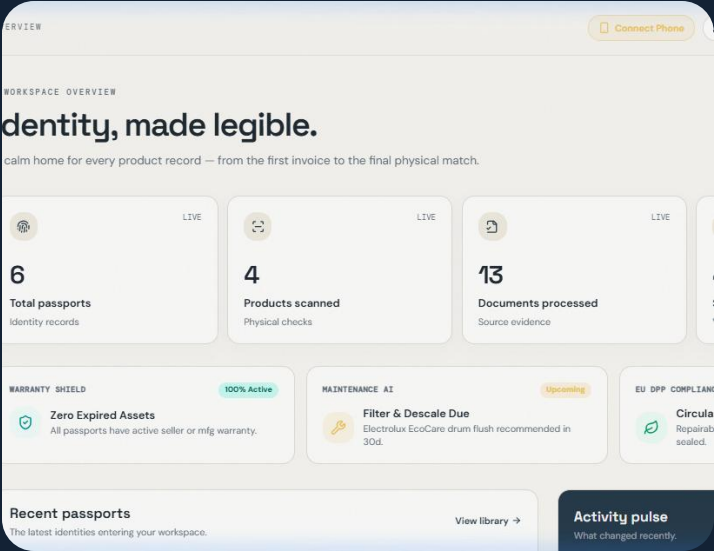

The assistant sees the current view while using the household graph to answer in context and suggest the right next step.

Share the live view

Understand priority and health

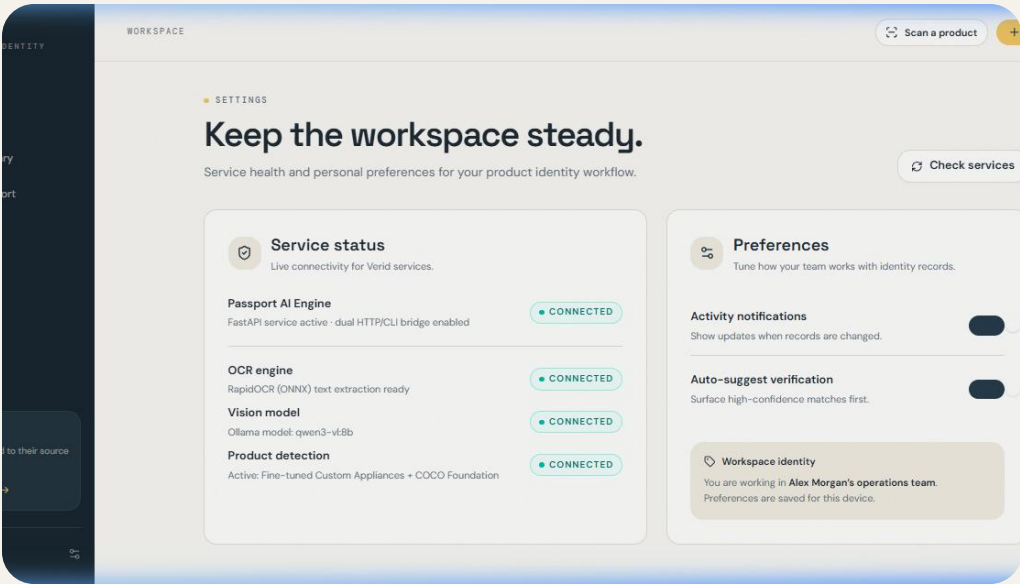

Ask with household context

“When does my washing machine warranty expire?”

Every answer carries its evidence

Verid shows the answer, why it reached it, and the source record. When the system cannot verify a detail, it says so.

Evidence

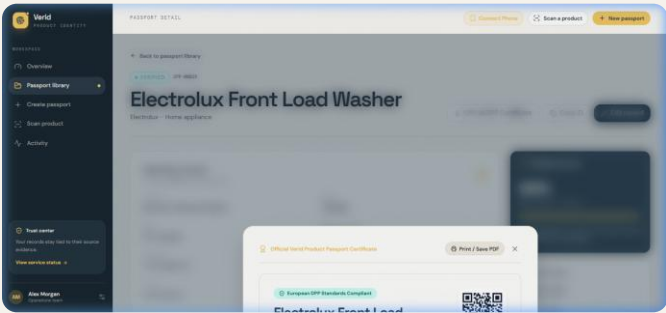

Invoice, product photo, manual, service log

Reasoning

A plain-language explanation for each result

Provenance

Traceable source record and confidence check

Offline mode keeps household data local while the system processes documents and answers questions.

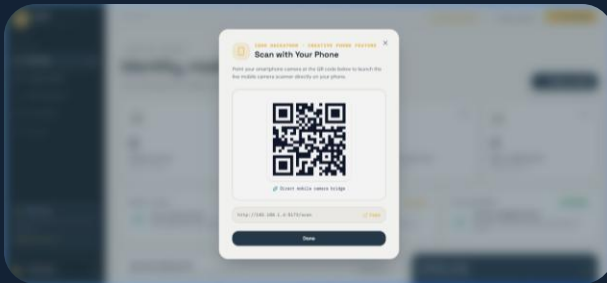

Three minutes to show the complete loop

The demo makes the product tangible: capture evidence, recognize the appliance, prove the passport, then trigger an action.

01

Connect a phone

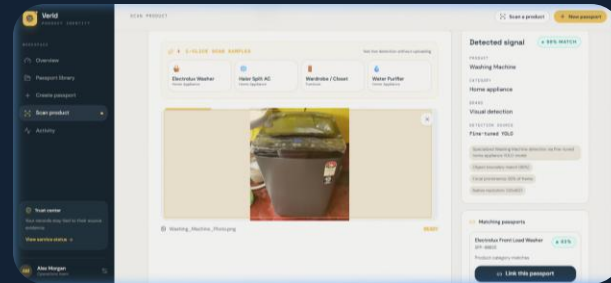

Scan the local QR bridge and open the live camera, with no app installation.

02

Start a live conversation

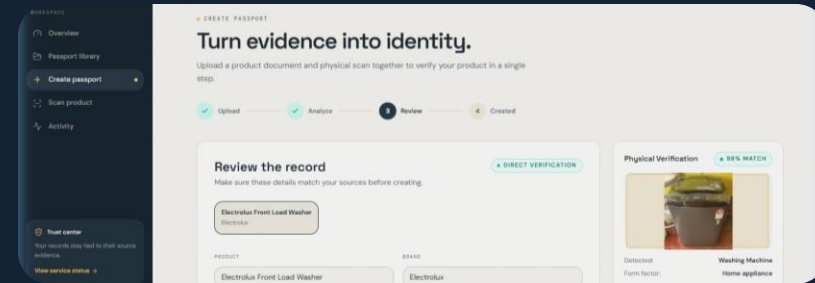

The vision assistant reads the scene and uses the home graph to understand what it sees.

03

Inspect the proof

Show the evidence-backed product record, warranty status, and source documents.

04

Take the next action

Surface a maintenance alert or prepare a complete warranty claim pack.

WHY VERID

A professional household companion for the mobile era.

Verid combines live vision, a household graph, product proof, and private mobile optimization in one working experience.

Working demo

Live camera conversation, product proof, attention center

Mobile first

Optimized experience for an everyday phone workflow

Team Verid / Ready to demonstrate a complete household conversation live
